

QUALITY AND ENVIRONMENTAL POLICY OF THE COMPANY

VISION AND MISSION OF THE COMPANY

For 40 years, our strategy has been focused on producing high-quality and continuously improving products in accordance with Customer requirements and environmental standards. We follow the market's rising demands with progress in quality and reliable Customer support. With our innovative solutions we are setting new standards and striving for new levels. Thereby we encourage the progress of electronic and electro industries within the domestic and foreign markets.

With our know-how, flexibility, productivity and investments in development we strive to become the European market leader specialised in the production of prototype multi-layer printed circuit boards.

EMPLOYEE'S RESPONSIBILITY:

Each employee is part of the Quality System of the Company and will therefore strive to:

- know, understand and fulfill the expectations of the Customer and co-workers, regarding the quality of the products and services;
- detect and eliminate the source of flaws and deviations in processes;
- cooperate in planning and continuous improvement of Quality and the Environment for the benefit of the Company as a whole.

MANAGEMENT'S RESPONSIBILITY:

Each leading employee or head of department in the Company is directly responsible for the implementation of the Quality Policy in the sense of:

- informing co-workers about the Quality and Environmental Policy as well as determine the individual's responsibilities and authorities;
- introducing and implementing the Quality System;
- monitoring and improving the level of compliance to Customer requirements;
- detecting sources of potential flaws and improving internal processes and work procedures;
- developing the quality system with Suppliers and Business Partners with whom we have a common interest;
- establishing, realizing and monitoring the improvement of the Quality and Environmental Programmes;
- managing co-worker's education and training needs in order to achieve planned quality, higher goals and responsible attitude towards the Environment;
- managing economical use of raw materials and energy resources;
- complying with Environmental Legislation.
